DETAILED ACTION

This Office Action is responsive to the Request for Reconsideration filed on September 15, 2005. However, a new rejection is presented for the following reasons of record.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Tanaka et al., JP 06-103992 (machine translation).

Rejection of claims 1-17 drawn to a fuel cell; claims 18, 19 drawn to a method for controlling a fuel cell.

Tanaka et al., teach a fuel cell (abstract) comprising an electrolyte comprising a proton conductor (sect. 0002), a fuel electrode (sect. 0002), an oxidant electrode (sect. 0002), an internal electrode (sect. 0011), and an electric voltage application means (sect. 0017). It teaches single layer of internal electrode (Fig. 3). It teaches plurality of layers of internal electrode (sect. 0012). It teaches ion exchange membrane (abstract). It teaches catalysts on supports (abstract). It teaches collectors (substrates) (sect. 0005). It teaches the method for controlling the above-described fuel cell (sect. 0013-0015).

Tanaka et al., do not teach potentiostat between internal electrode and fuel or oxidant electrode.

Art Unit: 1745

However, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because although it does not specifically describe the location of the potentiostat, sect. 0015 recites "electrical potential difference was measured..." which could be measured via a potentiostat.
